**SPECIFICATION NOTES**

- All planting is to be finished with a 50mm deep layer of mushroom compost, unless otherwise stated.

- The plan has been produced without full knowledge of underground services. Any new within 4m of services requires an appropriate root membrane to be positioned between the tree roots and services following the manufacturer’s recommendations. It will be left within the service trench with new services. Any tree or large shrub over services should be revised to meet the below ground conditions.

- The area of wildflower seeding should be prepared and sown following the supplier’s recommendations. Bulbs to be installed in scattered locations at a density of approximately 16 per square metre.

- The hedgerow mix is to be planted in groups of 5 of each species. It should be planted in double staggered rows at a density of 6 per linear metre at 200mm intervals. Low hedging to be planted as single plants every 500mm to ensure seasonal foliage cover.

**RECOMMENDATION**

- Espaliered fruit trees: 30% of land area
- Overstorey - 20% of land area
- Understorey - 15% of land area
- Ground flora - 5% of land area
- Trees varied in size to suit site
